ABOUT ME

I am an undergraduate student majoring in **Digital Media Arts**, with a focus on **interaction design**. My undergraduate training integrates **design and programming**, covering areas such as game development, AR/VR technologies, AI applications, UI design, and user experience design.

In addition to my coursework, I have participated in a student organization focused on **television production and live broadcasting**, where I gained hands-on experience with broadcast technologies, production workflows, and televisual aesthetics. These experiences have motivated my interest in exploring **intelligent broadcasting systems**, particularly how **AI and sensory-based interaction technologies** can assist camera operation and live production.

EDUCATION

Communication University of China — Beijing, China

Bachelor of Arts in Digital Media Arts, GPA: 3.83/4.00, Rank: 4/36 — Sep 2022 – Jun 2026

RESEARCH INTERESTS

- Intelligent Camera Control and Broadcast Systems
- AI-assisted Live Video Production
- Audiovisual Language in Multi-camera Live Shooting
- Action Prediction from Video
- Embodied Interaction and Haptic Feedback

PROJECT EXPERIENCE

- **Void Gale**

  Embodied Interaction & Sensor-based Control System | Unity + Arduino

  Developed a gesture-driven interactive system using gyroscope-based sensors, mapping physical body movements to real-time control of virtual vehicles, exploring embodied interaction and human–machine mapping strategies.

- **Flower Realm Romance**

  Hybrid Digital–Physical Interaction | Processing + Arduino

  Created a hybrid interactive system linking digital gameplay progression with physical installation feedback, exploring tangible interaction and emotional reinforcement through embodied visual response.

- **Threads into Heritage**

  AI-driven Interactive Art & Cultural Heritage | TouchDesigner

  An interactive art project combining AI-generated visuals with traditional cultural elements, exploring the role of AI in cultural heritage reinterpretation and contemporary artistic expression.

- **A Hand of God**

  Cross-platform Cooperative Interaction | Unity (VR) + Figma

  Designed a cross-platform cooperative puzzle game enabling asymmetric collaboration between VR and mobile users, investigating multi-device coordination and shared problem-solving.

- **Dunhuang Dream Quest**

  3D Interactive Game & Spatial Puzzle Design | Unreal Engine

  Designed a 3D adventure game focusing on spatial puzzle interaction and environmental storytelling, featuring code-based puzzle solving and rope-based parkour mechanics within a 3D environment.

- **HoloDesign Vision**

  Interactive Visualization System for Industrial Design | Unity

  Developed an interactive visualization tool generating holographic-style dynamic presentations, supporting model rotation, sectioning, and automated video output to enhance design communication efficiency.

- **Reborn: Working Part-Time at McDonald' s in CUC**
  3D Narrative Game & Everyday Interaction Design | Unity
  Created a 3D narrative-driven game integrating everyday cultural elements into interactive systems, combining environment exploration with task-oriented gameplay and lightweight puzzle mechanics.

BROADCASTING PRACTICE & INTERNSHIP EXPERIENCE

- Served as **Deputy Director** of the **Communication University of China Television Outside Broadcasting Student Organization (CUCTVOB)**, taking core roles in campus-level live productions including choral competitions, football matches, campus singer contests, and talent selection events. Responsibilities covered overall production coordination, live directing, subtitle directing, camera operation, video technical supervision, and audio system design. Recognized for outstanding contribution with the **2025 "Outstanding Team Contribution Award."**
- Acted as **Lead Instructor for Video Technology Training** in 2024 and 2025 training programs of CUCTVOB, delivering systematic instruction on broadcast workflows and technical systems, and was awarded the **Gold Instructor Award** for teaching excellence.
- Served as an **EVS Non-real-time Recording Operator** at the **Belt and Road Forum for International Cooperation**, and as an **EVS Operator** for **Chinese Super League (CSL) matches** at Beijing Workers' Stadium, supporting non-linear recording and replay operation in large-scale live production systems.
- Worked as a **Camera Operator** for the **Beijing Youth Championships** (Fencing, Archery, Figure Skating), gaining hands-on experience in multi-camera shooting, shot composition, and real-time audiovisual coordination.
- Participated in live entertainment broadcasts as a **Live Broadcast Technical Support and Subtitle Operator** for the **Yiche European Cup All-Star Match**, and as a **Technical Director** for the **LONSID · Pop Music Peak Night Concert**, responsible for on-site technical coordination, live production support, and subtitle system operation.

TECHNICAL SKILLS

- Programming Languages: Python, C#, Processing
- Frameworks / Engines: Unity
- Hardware / Systems: Broadcast cameras, video switchers, broadcast video systems, broadcast audio systems, timecode and synchronization systems

AWARDS & HONORS

- Third Prize, 14th Blue Bridge Cup National Software and Information Technology Talent Competition(C/C++ Program Design, Undergraduate Group A, Beijing Region), 2023
- Finalist Award, NetEase Thunder Fire Game Development Competition, 2023
- Second-Class Scholarship for Outstanding Undergraduate Students, Communication University of China, 2023
- Research & Competition Scholarship, Communication University of China, 2023
- Second Prize, 5th BICC China–UK International Creative Competition, 2025
- First Prize, 13th Future Designers National Digital Art Design Competition, 2025
- Third Prize, 8th EPACC International Environmental Public Welfare Design Competition, 2025
- Third Prize, 6th HKCDA Hong Kong Contemporary Design Award, 2025
- First Prize, China Innovation Image Competition, 2025

LANGUAGE SKILLS

- **English**: TOEFL iBT 81
- **Japanese**: JLPT N1 121
